Table 1: CODECHECK summary

Item	Value
Title	*FIXME add title*
Author(s)	TODO
Reference	https://doi.org/10.1234/example
Repository	https://github.com/example/repo
Codechecker(s)	FIXME, SOMEONE ELSE
Date of check	2023-11-15
Summary	TODO add summary

Table 2: Summary of output files generated

File	Comment	Size (b)
`example_output.txt`	Example output file - replace with actual outputs	0

Summary

TODO add summary

CODECHECKER notes

TODO

Here is an example code block using Python.

```python
def fahrenheit_to_celsius(fahrenheit):
  return (fahrenheit - 32) * 5 / 9

print(fahrenheit_to_celsius(77))
```

Recommendations to the authors

FIXME, SOMEONE ELSE (2023). CODECHECK Certificate 2025-023. Zenodo. https://doi.org/10.5281/zenodo.14900193

About CODECHECK

This certificate confirms that the codechecker could independently reproduce the results of a computational analysis given the data and code from a third party. A CODECHECK does not check whether the original computation analysis is correct. However, as all materials required for the reproduction are freely availableby following the links in this document, the reader can then study for themselves the code and data.

About this document

This document was created using codecheck-py (a Python-base template for creating CODECHECK certificates). The CODECHECK details are filled into a jupyter notebook which is then converted into Markdown via nbconvert. Afterwards it gets converted into Typst using cmarker and then into PDF using Typst.
