FIXME, SOMEONE ELSE (2023). CODECHECK Certificate 2025-023. Zenodo. <https://doi.org/10.5281/zenodo.14900193>

About CODECHECK

This certificate confirms that the codechecker could independently reproduce the results of a computational analysis given the data and code from a third party. A CODECHECK does not check whether the original computation analysis is correct. However, as all materials required for the reproduction are freely available by following the links in this document, the reader can then study for themselves the code and data.

About this document

This document was created using [codecheck-py](#) (a Python-base template for creating [CODECHECK](#) certificates). The CODECHECK details are filled into a [jupyter notebook](#) which is then converted into Markdown via [nbconvert](#). Afterwards it gets converted into [Typst](#) using [cmarker](#) and then into PDF using Typst.
